

WildPosh

PAN-EUROPEAN ASSESSMENT, MONITORING, AND MITIGATION OF CHEMICAL STRESSORS ON THE HEALTH OF WILD POLLINATORS

PROJECT SUMMARY

WildPosh is a multi-actor, transdisciplinary project whose overarching mission and ambition are to significantly improve the evaluation of the risk to wild pollinators of pesticide exposure, and enhance the sustainable health of pollinators and pollination services in Europe.

CONSORTIUM

17 Institutions

10 Countries

STRUCTURE

9 Work Packages

DURATION

4 Years, January 2024–December 2027

PROJECT COORDINATOR

Prof. Denis Michez

Head of the Laboratory of Zoology at the University of Mons, Belgium

✉ Denis.MICHEZ@umons.ac.be

OBJECTIVES

Determine the real-world agrochemical exposure profile of wild pollinators at landscape level, within and among sites

Characterise causal relationships between pesticides and pollinator health

Build open database on pollinator traits/distribution and chemicals to define exposure and toxicity scenario

Propose new tools for risk assessment on wild pollinators

Drive policy and practice

Provide the first pan-European quantification of the exposure hazard of pesticides to representative wild pollinators while characterising their populations

Use integrated and controlled laboratory and semi-field experiments, determining how major categories of pesticide alone and in mixtures affect pollinator health

Develop databases on ecological traits and the spatial distribution of pollinators in relation to their potential exposure to pesticide, and on pesticide use and their toxicity

Propose integrated systems-based risk assessment tools for wild pollinators

Use innovation to meet the need for monitoring tools, novel screening protocols, and practice- and policy-relevant research outputs to local, national, European, and global stakeholders
